

Simple Sales Dashboard - Project Report

Project Overview

The Simple Sales Dashboard project is a data visualization initiative utilizing Microsoft Power BI to analyze and present sales data from the Global Superstore 2016 dataset. The primary goal is to provide actionable insights into sales performance across various dimensions such as region, category, and profit.

Project Objectives

- Develop an interactive dashboard to monitor key sales metrics.
- Enable dynamic filtering by region, category, and other relevant dimensions.
- Identify top-performing products and regions to inform strategic decisions.
- Visualize profit trends and sales distribution effectively.

Project Files

- global_superstore_2016.xlsx: The primary dataset containing sales records.
- globalstoredashboard.pbix: The Power BI dashboard file visualizing the sales data.
- super store dashboard.png: A screenshot of the main dashboard interface.
- Performance_dashboard.png: An alternative view focusing on performance metrics.

Dashboard Features

- Key Performance Indicators (KPIs): Displays total sales, profit, and order quantities.
- Geographical Analysis: Maps showcasing sales distribution across different regions.
- Category Breakdown: Bar charts illustrating sales by product category and sub-category.
- Profit Trends: Line graphs tracking profit over time to identify growth patterns.
- Interactive Filters: Slicers allowing users to filter data by region, category, and time period.

Project Outcomes

- Successfully created an interactive dashboard that provides comprehensive insights into sales data.
- Enabled stakeholders to identify high-performing products and regions.
- Facilitated data-driven decision-making through clear visualizations and filters.
- Demonstrated the effectiveness of Power BI in transforming raw data into meaningful insights.
